

Technology (IT) toolboxes must be developed to support the Urban Forest Strike Teams.

Objective:

- Create a hardware system<sup>1</sup> for UFST training & response
- Create a dedicated system always available for response
- Create a system that eliminates compatibility issues typically experienced
- Use best available technology with moderate accuracy (1-3 meter)
- Provide appropriate support for field crews and the Team Leader

In addition to the team toolboxes which are housed at each state U&CF office, IT Toolboxes will be housed regionally with additional team toolboxes.

Two (2) IT Toolboxes are needed to support response and training.
